# WEEKLY R.M.'S LOOK-SEE

VOLUME 4

NUMBER 4

The Weekly Research Magazine's Look-See is published by the UFO Information Exchange Alliance, 2875 Sequoyah Drive, Atlanta 5, Georgia.

**NOTICE:** Following the completion of volume 4 (two more issues) Look-See will go on its "summer vacation", and will resume publication during August. A revised format (such as this issue's), an expanded news service, and other improvements, will be made so that there will be a "new look" with Look-See in the Fall.

**TEENAGERS SIGHT UFO:** On Saturday, April 28, 1962, at 9:45 P.M. CST, 5 teenagers observed a UFO which they described as "A brilliant white in color, brighter than any other object in the sky, the size of a dime at arm's length. Observing the object for 45 minutes, one of the teenagers began to flash a light on and off at regular intervals in the direction of the object. After a while the object began to approach the witnesses, blinking on and off in apparent response to the signal. This report comes to us via NJAAP, and was made in Eaton, Indiana.

**UFO SIGHTED FROM OBSERVATORY:** On April 30, 1962, at 8:24 P.M. Macario Lopez, age 17, sighted an Unidentified Flying Object through a 4" Unitron telescope at The Magdalena High School Observatory in Magdalena, New Mexico. The saucer-shaped object, which was traveling from East to West, was also observed by Mr. G.G. Thompson, the Superintendent of schools, and by I.N.S. member, R.L. Dobbins. This sighting, lasting for about two minutes, was reported to us by INS.

**"SINGING" FIREBALL SIGHTED:** The latest in the recent series of "fireball" UFO reports comes to us from Chattanooga, Tennessee. One woman described the object as having been "the color of a fluorescent light....about the size of a small house", and, referring to the sound of the object, she stated it "sounded like it was singing." It is noteworthy to mention that the apparently baffled meteorologists have only been able to give a weak "probably a meteor" in all of these recent "fireball" UFO incidents. Perhaps the 'green' fireballs are, indeed, back with us, once again.

**QUOTE OF THE MONTH:** (Made by John Glenn concerning the now-infamous 'firefly' particles which he sighted). "I don't feel they were snowflakes or paint peeling off the outside of the capsule. I don't feel they originated from the capsule at all, because some of them were coming toward me."
